Standard: Identify the visual indicators of IEDs using the naked eye and/or optics without causing injury to personnel or damage to equipment.

Special Condition: None

Special Standards: None

Special Equipment:

Safety Level: Low

MOPP: Sometimes

Task Statements

Cue:

DANGER

None

WARNING

SECONDARY AND TERTIARY IEDS SHOULD BE EXPECTED IN THE AREA. FAILURE TO COMPLY COULD RESULT IN IMMEDIATE PERSONAL INJURY OR DAMAGE TO EQUIPMENT.

CAUTION

None

Remarks: Due to the almost unlimited number of possibilities, this task cannot identify all potential indicators, and is not all inclusive to identifying the IED threat.

Notes: The primary indication of an IED will be a change in the environment (something new on the route that was not there yesterday). The enemy may leave behind visual indicators of an emplaced IED by accident or, in some cases, on purpose to inform the local population or for use as an aiming reference point. Vigilant observation for these subtle indicators can increase the likelihood of IED detection by friendly forces before detonation.

Performance Steps

1. Identify the three components of an IED.

a. Main charge (explosives).

Note: Common hardware, such as ball bearings, bolts, nuts, or nails, can be used to enhance the fragmentation. Propane tanks, fuel cans, and battery acid can and have been added to IEDs to propagate the blast and thermal effects of the IED.

(1) Military munitions (mortar rounds, artillery rounds, etc).

(2) Military grade explosives.

(3) Commercial explosives.

(4) Homemade explosives.

b. Initiating system (sets off the IED).

c. Casing (contains any or all components of the IED).

Note: Casings can be anything that can contain any or all components of the IED. The casing can provide enhanced fragmentation and also camouflage the IED. The following are not all inclusive; the casing can be virtually anything.

(1) Animal carcasses.

(2) Plastic bags.

(3) Soda cans.

(4) Vests or satchels for suicide bombers.

(5) Plastic jugs.

(6) Barrels.

2. Identify initiation methods used to detonate IEDs.

a. Time.

(1) Igniferous (producing fire).

(2) Chemical.

(3) Mechanical.

(4) Electric.

b. Command.

(1) Command wire.

(2) Radio controlled devices.

(a) Long Range Cordless Telephones (LRCT).

(b) Cellular phones.

(c) Remote car openers and alarms.

c. Victim operated.

(1) Pull or trip.

(2) Pressure.

(3) Pressure release.

(4) Movement-sensitive.

(5) Light-sensitive.

(6) Proximity.

(7) Electric switches.

3. Identify roadside IED indicators (suspicious objects or activities that seem out of place).

a. Unusual behavior patterns or changes in community patterns, such as noticeably fewer people or vehicles in a normally busy area, open windows, or the absence of women or children.

b. Vehicles following a convoy for a long distance and then pulling to the roadside.

c. Personnel on overpasses.

d. Signals from vehicles or bystanders (flashing headlights).

e. People videotaping ordinary activities or military actions.

f. Metallic objects, such as soda cans and cylinders.

g. Colors that seem out of place, such as freshly disturbed dirt, concrete that does not match the surrounding areas, colored detonating cord, or other exposed parts of an IED.

h. Markers by the side of the road such as tires, rock piles, ribbon, or tape that may identify an IED location to the local population or serve as an aiming reference (such as light poles, fronts or ends of guardrails, and road intersections or turns).

i. New or out of place objects in an environment such as dirt piles, construction, dead animals, or trash.

j. Graffiti symbols or writing on buildings.

k. Signs that are newly erected or seem out of place.

l. Chemical containers (such as cylinders and drums) that appear out of place.

4. Identify common areas of IED emplacements.

- a. Previous IED sites (past successes).
- b. Frequently traveled, predictable routes, such as roads leading to unit locations and along common patrol routes.
- c. Culverts.
- d. Area of operations (AO) turnaround points (established patterns).
- e. Roadway shoulders (usually within 10 feet).
- f. Medians, or buried under the surface of any type of road, often in potholes and covered with dirt or reheated asphalt.
- g. Trees, light posts, signs, overpasses, and elevated bridge spans.
- h. Unattended vehicles, trucks, cars, carts, or motorcycles (attached or installed in them).
- i. Guardrails (hidden inside) or under any type of material or packaging.
- j. Potential incident control points (ICPs).
- k. Occupied or abandoned structures (sometimes partially demolished).
- l. Cinder blocks (hidden behind) or piles of sand to direct blast into the kill zone.
- m. Animal carcasses and deceased human bodies.
- n. Fake bodies or scarecrows in coalition uniforms.

5. Identify the IED threat types.

- a. Disguised static IED, which includes anything that the IED can be concealed in.
- b. Disguised moveable IED.

(1) Vehicle-Borne Improvised Explosive Device (VBIED).

- (a) Abandoned vehicle on the roadside.
- (b) Vehicle may appear overloaded, with chassis low to the ground.
- (c) Donkey carts or other loaded trailers left on the roadside.
- (d) Darkened windows or shades.
- (e) Parked near a high-profile target or route.
- (f) Parked unusually close to moving traffic.

(g) License plates or vehicles that are unusual for the area of operations.

(h) Illegally parked or broken down at a choke point.

(i) Recently painted.

(j) Fake markings.

(2) Suicide Vehicle-Borne Improvised Explosive Device (SVBIED).

Note: Often, multiple vehicles are involved. The lead vehicle is used as a decoy or barrier buster. Once it is stopped, forces move in to clear or inspect the vehicle. Then the SVBIED vehicle approaches the crowd and detonates.

(a) Driver may ignore orders to stop.

(b) Driver may attempt to circumvent security.

(c) Driver may allow a convoy to come to him (pull over and let a convoy begin to pass).

(d) Driver may appear sedated/intoxicated (for example, driving erratically).

(e) Vehicle may be moving erratically or not in a normal traffic pattern (trolling).

(f) May target traffic merging from an on-ramp.

(g) May target traffic merging from intersections or breaks in the median.

(h) May target oncoming traffic with no hard barrier or median separating it from the patrol.

(3) Person-Borne Improvised Explosive Device (PBIED).

(a) Attacker may appear calm, yet intensely focused.

(b) May stand out from others in mood or behavior.

(c) May have a fixed stare and be unaware of environment.

(d) May shout a brief political or religious statement; muttering (praying).

(e) May exhibit sweating.

(f) Bulging coat or clothing that does not fit the season or event.

(g) May walk in an unusually erect manner or have a lump under their clothing.

(h) Briefcase with protruding wires or a visible arming or firing switch.

c. Thrown or projected IEDs (improvised grenades or mortars) used mostly from overhead passes or from the roadside in front of approaching vehicles or in the middle of convoys.

d. Hoax IEDs, which includes something resembling an actual IED, but have no charge or a fully functioning initiator device.

(Asterisks indicates a leader performance step.)

Evaluation Preparation: Provide the Soldier with an area where indicators of IEDs are visible by either the naked eye or by the use of optics.

Environment: Environmental protection is not just the law but the right thing to do. It is a continual process and starts with deliberate planning. Always be alert to ways to protect our environment during training and missions. In doing so, you will contribute to the sustainment of our training resources while protecting people and the environment from harmful effects. Refer to FM 3-34.5 Environmental Considerations and GTA 05-08-002 ENVIRONMENTAL-RELATED RISK ASSESSMENT.

Safety: In a training environment, leaders must perform a risk assessment in accordance with FM 5-19, Composite Risk Management. Leaders will complete a DA Form 7566 COMPOSITE RISK MANAGEMENT WORKSHEET during the planning and completion of each task and sub-task by assessing mission, enemy, terrain and weather, troops and support available-time available and civil considerations, (METT-TC). Note: During MOPP training, leaders must ensure personnel are monitored for potential heat injury. Local policies and procedures must be followed during times of increased heat category in order to avoid heat related injury. Consider the MOPP work/rest cycles and water replacement guidelines IAW FM 3-11.4, NBC Protection, FM 3-11.5, CBRN Decontamination. Complete a risk assessment before conducting training, operations, or logistical activities. Instruct soldiers to wear all appropriate personal protective equipment (ballistic goggles, helmet and gloves). Have soldiers remove jewelry, including rings and watches prior to conducting training.
